The tag number on the back side of the transmission case which is usually metal is the model number and the first two letters are the model year. If the case is aluminum and not galvanized (which most have become due to Allison's move to the extrusion process) you will have to dig a little deeper to find the model number. To search for the serial number you must find the line on the case that goes from the bottom of the case to the top of the case. You will see a large gap in this line as it goes up to the top of the case. Next, you will find the location of the transmission number which is often a white or silver "T" stamped on the case. The process described above will work with most newer transmissions and will give you the model and serial number. To get the model number on older transmissions (maybe as early as the 70's) you will have to dig a little deeper, but the process will be the same. The first part to look for is the line on the bottom of the case which will be a large gap. In the middle of this line you will see the lower transmission number. This transmission number will be in the same location as in the newer transmissions. If you can find the transmission number on the case you can then search the serial number by following the same process. With the advent of the Internet, consumers are provided with an abundant and, to some extent, inexpensive source of content. Content providers are able to publish content to the Internet for free. Given the large amount of content available, it is important to allow a consumer to find content that is useful to the consumer and provides satisfaction. With the abundance of content, a consumer has difficulty in finding content that meets these criteria. Some conventional methods of finding content are cumbersome. For example, a user may have to search for content in a piecemeal fashion, which is not helpful or convenient. To improve the efficiency of finding content, some systems generate a list of search terms and then enable a user to select one or more search terms. One example of a system that performs this function is Google®. With this system, a user enters a search term into a web browser, which in turn transmits the search term to a server. The server then generates a list of search terms (e.g., words) that are related to the original search term, in response to the search term. The server transmits the list of related search terms to the user. The user selects

Allison 1000 Transmission Serial Number - Allison 1000 Transmission Serial Number. allison 1000 transmission serial number. Stock car racing Jan 22, 2019 My transmission serial number is 2023 so it should be in the 50's in code. My code for my trans is B3K105820. I need a code for my transmission serial number, not the code for the trans on the car. Oct 15, 2007 what is my transmission serial number. if it is a 9000 series transmission?. i need to know what it is, to take it to my mechanic. Jan 27, 2016 for the hondas of the world, is the autobox new and improved, i'm thinking yes. is the 10 Or 12 Or 13 series the same as the 9000 series.
