

FIX HTML5 Validation for WP Editor Fields (unable to submit form even if field has value) ... This requires WP Job Manager 1.35.0+ (not released yet), ... How can this be fixed? Best wishes, Jon I fixed this for myself. I think it may have something to do with how WP handles CSS to make it look good, rather than how it handles HTML. I think that for some fields you can either insert text into them as if they were a table cell, or you can insert text into the table and then replace it with text. In the example, I removed the code that didn't work for me You can also just copy it and replace it.
