SQLData Express for Informix to MySQL Version History: Version 0.0.2 - Jun 30, 2006 Version 0.0.1 - Jun 28, 2006 SQLData Express for Informix to MySQL Reviews: This program was reviewed by Joseph Keating from www.dsireports.com on May 27, 2006. Wow, I was sold by your reviews. I'm not a CODER, I'm a QUALITY ASSURED. So for the others, in case of questions, you may want to see this item to review it. Your program works very well. The problem I'm now having is that I can't cancel this job. I really can't tell you why. The job is still running and my cancel button is grayed out. And no, nothing is in the log file. The last time it happened, I rebooted my computer but I don't think it was that. I'm running Windows 2000. Any ideas on what I can do to cancel this job? Joseph Keating So I've been using SQLData for about a month now, and it's been a great tool to work with Informix. I was able to download about 5 large databases, compare two databases, and even upload files to be able to compare them. All of these tasks were completed very quickly and easily. For all the people that are confused about why they should use SQLData, this program makes it easy to do these tasks, and maybe even more. I wouldn't know because I haven't gotten to the more difficult stuff. With that being said, I still have a question. When it comes to uploading large databases, it's always giving me the "Cannot download file because of insufficient free space". I have about 600 MB free space, but SQLData still tells me that. What can I

KEYMACRO is a command line utility for Informix. KEYMACRO converts the KEYWORDS in a data file to an equivalent file in a MySQL table. The KEYWORDS in a data file must follow certain rules (can be one of the following formats: ALL, COW, MIXED, TEXT, VERSION, all, text, version,) In addition, each column in the record set must have a defined ALIAS and associated keyword (if available). The data in the file must be tab separated (i.e., each record has a TAB character at the end of the record). Each record must have a specific length. The user defines the KEYWORD for each column as a function of the column name. The command line options in the following format can be used for specifying the following parameters: Parameter Description Keyset Name The name of the keyset to use. Valid values are OLD and NEW. Output Format The format of the output file. Valid values are TABLE, DUMP, HEX, and DATABASE. Rules The file that the KEYWORDS will be created from. Can be specified with the -S option. Source The file that the KEYWORDS will be copied from. Can be specified with the -S option. The following sample command line shows how to perform this action: KEYMACRO \-d hdatabase \-s sourcekeyset.infile \-o keyset.outfile \-o dumptable.outfile Please visit the following Web site for more information: OPTIONAL SUB-COMMANDS: For further information on the sub-commands use the following command line: keymacro COMMAND Examples: Note: The following sample command line show how to perform this action with the KEYMACRO SCHEMA command, KEYMACRO SCHEMA \-d hdatabase \-s sourcekeyset.infile \-o keyset.outfile \-f keyset.outfile To create a Schema from a data file, provide the following options: Keymacro SCHEMA \-d hdatabase \-s sourcekeyset.infile \-o keyset.outfile Keymacro SCHEMA \-d hdatabase 1d6a3396d6
