

Category:2003 video games Category:City-building games Category:Linux games Category:Windows games Category:Commercial video games with freely available source code Category:Open-source video games Category:Video games developed in the United StatesQ: Can't do joined to select query I am new to mysql. I can't seem to do a JOIN on multiple tables. SELECT company_table.*, company_address_table.address1, company_address_table.address2, company_address_table.city, company_address_table.state, company_address_table.zip, company_address_table.postalcode FROM company_table LEFT JOIN company_address_table ON company_table.address_id=company_address_table.id WHERE company_table.id="'. Sid. ' AND company_address_table.deleted = '0'"; A: You need to qualify the table name. Try this: SELECT company_table.*, company_address_table.address1, company_address_table.address2, company_address_table.city, company_address_table.state, company_address_table.zip, company_address_table.postalcode FROM company_table LEFT JOIN company_address_table ON company_table.address_id=company_address_table.id WHERE company_table.id="'. Sid. ' AND company_address_table.deleted = '0'"; Additionally, you should consider using a placeholder (usually?, eg. ') to prevent SQL injection attacks. The present invention relates to a rotary-pulse motor control method and circuit, and in particular to a rotary-pulse motor control method and circuit which provides a means for controlling a rotary-pulse motor without using a position sensor. In the case of conventional rotary-pulse motors in general, a position sensor such as a Hall sensor is attached to a rotor of a rotary-pulse motor to detect the position of the rotor. The position sensor and the rotary-pulse motor have respective drive circuits. In order to control the rotation of the rotary-pulse motor, it is necessary to detect the position of the rotor by using the position sensor
