History AutoCAD Crack started in 1982 as a DOS-based CAD system and continued to be developed throughout the next decade. Many key features, such as xrefs and tags, did not exist at the time and they were added later on. In 1993, AutoCAD Free Download introduced the model space command in AutoCAD LT and the drawing functions became accessible to the command line. AutoCAD 2.0 in 1995 added many of the first commercial applications, such as a path editor, text annotation tool, and 3D models. In 1998, AutoCAD 3D was introduced. On 10 December 2015, Autodesk announced AutoCAD LT 2020, which is a complete rewrite of AutoCAD LT with a focus on extensibility. Awards AutoCAD is a registered trademark of Autodesk, Inc. On that page I am performing an ajax request. I want to make the submit button disabled until the ajax request is done. When the user clicks submit it should wait for the response and then enable the button. I tried the following: `var submitButton = document.getElementById('questionnaire-submit'); submitButton.disabled = true; $.ajax({ url: "{{route('questionnaire')}}", method: "post", data: { }, success: function(data){ submitButton.disabled = false; console.log(data); $('#submit-button').show(); } });` But this just enables the button after the ajax request is successful. Does anyone have a good solution for this? A: By default, the AJAX request is asynchronous, so the button will be enabled before the response of the AJAX request arrives. You can change the behavior of this request by using the `async` property of the AJAX options, like this: `$.ajax({ url: "{{route('questionnaire')}}", method: "post", data: { }, async: false, success: function(data){ submitButton.disabled = false; console.log(data); $('#submit-button').show(); } });` This will make the AJAX request synchronous (blocking the code until the AJAX request is complete) Royal Scots Dragoon Guards The Royal Scots Dragoon Guards (Scottish
