Note The Start Screen is the launching pad for the various tools inside Photoshop. ## The Layers Panel The Layers panel appears as shown in Figure 1-3, in which you see the layers of a picture that you've just opened. It contains one or more layers, with each of them in its own stack, which are listed at the top of the panel. At the bottom of the Layers panel are a variety of editing tools, as well as things that are useful for creating and arranging layers. Figure 1-3. Each layer—it's called a "layer" because it's stacked up on top of the next, just like layers in photographs are stacked on top of one another—is in its own stack. The Stacks panel, visible in this example, lists those stacks. The tabs along the top edge of the panel contain useful things, like an Expert button that opens a floating palette with instant access to the Photoshop Help. The Layers panel is the main way to manage the image's layers. Here's a quick tour through the various items that appear in the Layers panel: * * * Stacks * *. Each layer is represented by a stack. When you have more than one layer in your file, this is where they go—in different stacks. The easiest way to view the stacks and even move layers from one stack to another is to click the Stacks panel button, labeled in Figure 1-3.

The Book of Heaven and Earth The Book of Heaven and Earth () or The Book of Ten Thousand Sections of Heaven () is a book of legendary texts from the Chinese scholarly tradition, of which some 200 editions survive from the 15th and 16th centuries, and a number of dated compilations. The most celebrated of the early compilations was written at the behest of the eminent Ming scholar Mei Ying in 1421, and gives a pedagogic introduction, mentioning the earlier manuscript and bringing together 28 earlier works. The earliest surviving version, dating to 1558 (Luoyang edition), consists of 1,400 fascicles, organized by four main topics, namely the seasons, four capitals, the four seasons of human life and the ten thousand sections of heaven. It took the form of a palimpsest, a continuous scroll with sections of earlier text obscured by later additions, including both early examples of calligraphic calligraphy, now mostly illegible, and later additions not originally intended for the text, for example copies of annotated versions of the Confucian classics such as the Analects. Its status as a classic is ascribed to the definition of chujia lunwen (Chinese commentary on a book of the Ten Thousand Things), the first significant use of the term by Xu Shen () in a comment on the book. Its defining text is one of the Siku Quanshu, the compendium of poetry and prose, with lines from the Chuqi, an ancient anthology of poems attributed to Confucius, praising the book. It is also associated with the term xianhua 仙話 "Summer Discourses", an imperial oracle developed in the Ming dynasty. Liang Yusheng, master of the Ming dynasty painter Wu Daozi (born in 1480, died 1569), wrote a commentary to The Book of Heaven and Earth, and devoted three of his completed paintings to the book. The present invention relates to a fuel injector for internal combustion engines, the fuel injector including a nozzle member which accommodates a fuel supply line, a nozzle which projects through the nozzle member and through which a fuel is injected, and a valve member which is arranged in the fuel supply line and controls a fuel flow through the fuel supply line. In an injector of the above-mentioned type, a nozzle plate is known which accommodates the nozzle. The nozzle plate is arranged in a plastic injection molding process and forms a groove around the nozzle as seen in direction to the center of the injection molding. This groove is open to the end face of the nozzle plate at the nozzle. The injector is not suitable for every type of injection molding process, since the nozzle plate cannot be inserted in all injection molding machines without a modification. A modification of the injection molding machine is required to make the groove in the nozzle plate. Another drawback is that the nozzle plate may get stuck in the injection molding machine, since the groove is not closed in the nozzle plate. It is an object of the invention to provide a fuel injector which overcomes the above-mentioned drawbacks. According to a first aspect of the present invention, a fuel injector is provided, the fuel injector comprising a nozzle member which accommodates a fuel supply line, a nozzle which projects through the nozzle member and through which a fuel is injected, and a valve member which is arranged in the fuel supply line and controls a fuel flow through the fuel supply line. The nozzle member includes a first element, a second element being arranged on a side of the first element in the injection molding process, and the valve member being arranged at a boundary between the first and second element. In the fuel injector according to the invention, the valve member is arranged at a boundary between the first and second element which defines the space for accommodating the nozzle. Thus, when the nozzle plate is installed in the injection molding machine, the gas is prevented from getting into the space for accommodating the nozzle, which is formed by the boundary of the first and second element. It is for this reason that it is impossible for the gas to get into the space through the nozzle. A drawback of the prior art is that the flow resistance is high, particularly in a fuel injector which is operated at a high pressure. In the first element of the nozzle member according to the invention, a central space for accommodating the nozzle is defined. The valve member is
